User Notes:

- 1) Plant species not listed are considered UPL for wetland delineation purposes.
- 2) A few UPL species are listed because they are rated FACU or wetter in at least one Corps region.
- 3) Some state boundaries lie within two or more Corps Regions. If a species occurs in one of the regions but not the other, its rating will be shown in one column and the other column will show a dash. For example, there are two Corps regions in North Dakota, the GP and the MW. *Agrostis exarata* occurs in the GP but not the MW, so it is listed as:
